

While the environmental challenges facing the world today can seem daunting, they present tremendous opportunities for eco-entrepreneurs who have the training to advance an innovation along a trajectory that leads from science to solutions. The Namibian environmental sector offers many such opportunities for green business but often skills are lacking to advance sustainable economic growth solutions and sustainable business practices.

The Namibia Business Innovation Institute (NBII) at the Namibian University of Science and Technology (NUST) and the Hanns Seidel Foundation Namibia (HSF) are co-hosting the Eco-Entrepreneur Jump-Start Training Workshops in 2017 as a part of the ThinkNamibia Environmental Awareness Campaign. This public call is addressed to businesses and start ups to pitch their ideas and undergo a focused 3-day training followed by mentorship to develop your local eco-businesses.

To participate, please complete the form on the the right, scan and email it to the contact person below by **Friday 24 February 2017**.

Forms are also available in hard copy or electronic format from the NBII in Windhoek West, 1-3 Glück Street. For more information or to submit your form, please contact:
